Appendix 5 – Abcam Section 106 Heads of Terms

Item	Mitigation Measures	Costs (Indicative)	Reasoning			
Transp	Transport					
1	Improved crossing facilities for pedestrians and cyclists at the Addenbrooke's Road / Francis Crick Avenue / Dame Mary Archer Way three-arm roundabout	To be undertaken by developer.	To support pedestrian and cycle access to site and mitigate increased traffic levels resulting from the development			
2	A Travel Plan with commitment to achieving reduced car driver mode share to be agreed for all buildings Sustainable Transport Investment Fund to be established to invest in promoting sustainable transport to developments within Phase 2, if the agreed Travel Plan car driver mode share target has not been achieved. Fund identified to be drawn down if targets are not achieved two years following occupation	Phase 2 Sustainable Transport Fund £138,800 upper limit based on £500 for 10% of total number of staff within development to incentivise mode shift. Final figures to be agreed	To address concern that the relocation of staff to the campus will be managed and that target mode shares can be achieved. The fund would be used to help support further sustainable transport promotion.			
3	Commitment through the Travel Plan to liaise with bus operators and CBC Sustainable Transport Group to facilitate forward planning of bus capacity needs on Campus. Bus Occupancy Surveys to be undertaken by developer for each phase, including Abcam, to help monitor capacity serving the campus and facilitate engagement with bus companies.	To be undertaken by developer.	To address concern that the established bus services on CBC Phase 1 & 2 will not have sufficient capacity to provide for the development needs due to sudden increases in cumulative demand within the campus. This is a potential short term problem which could reduce the attractiveness for bus use by new staff at the development.
