

Joint Local Planning Advisory Group (JLPAG)

Item

North East Cambridge Area Action Plan: Proposed Submission (Regulation 19)

To: Joint Local Planning Advisory Group (JLPAG)

Report by:

Stephen Kelly, Joint Director for Planning and Economic Development
Cambridge and South Cambridgeshire

Tel: 01223 - 457009 Email: Stephen.Kelly@greatercambridgeplanning.org

1. Executive Summary

- 1.1 This report introduces the Proposed Submission North East Cambridge Area Action Plan (AAP) that establishes the Councils' policies and proposals for managing development, regeneration and investment in North East Cambridge over the next twenty years and beyond.
- 1.2 It follows public consultation on the draft Area Action Plan in July 2020 that sought to elicit views on the development proposals for the area as a whole and the contribution individual sites and development parcels would make, in terms of housing, employment, and social and physical infrastructure, as well as the detailed proposals for development management policies, and how these would contribute towards delivery of the vision and objectives for the area as a whole.
- 1.3 This report summarises the main issues raised in comments made to consultation on the draft Area Action Plan document and the changes that have been made, in response to those issues and to new evidence, in preparing the Proposed Submission AAP for approval by both local planning authorities.
- 1.4 The Proposed Submission AAP is to be reported to the respective decision-making committees of the Councils over December 2021 to

January 2022. The next stage of consultation will then need to await the outcome of the Development Consent Order process for the relocation of the Cambridge Waste Water Treatment Plant, on which the AAP is predicated.

2. Recommendations

The Joint Local Planning Advisory Group (JLPAG) is invited to consider and comment on the North East Cambridge Area Action Plan: Proposed Submission document and its Policies Map (Appendix A1 and A2), including the changes proposed to it in response to the comments received to consultation on the draft Area Action Plan held in 2020 as set out in the Consultation Statement (Appendix D), having regard to the supporting documents (see Appendices B,C, and E to H) and evidence base (see Appendix I and the Background documents to this report), which are to be reported to Cambridge City Council and South Cambridgeshire District Council's respective decision-making committees in January 2022.

3. Reasons for Recommendations

- 3.1 To provide views to the decision making committees in each Council as part of progressing production of the North East Cambridge AAP in accordance with the adopted Greater Cambridge Local Development Scheme.

4. Background

- 4.1 Cambridge City Council and South Cambridgeshire District Council (the Councils), with the support of Cambridgeshire County Council, began work on preparing a joint AAP in February 2014 with publication of an initial Issues & Options document.
- 4.2 The extent and ambition for the area's regeneration has grown since that time and, in particular, following the confirmation of the Housing Infrastructure Funding (HIF) to relocate the Waste Water Treatment Plant (WWTP) that, if approved, would enable a comprehensive approach to this urban site. The Area Action Plan is predicated on that relocation taking place. Combined with the delivery of significant new transport infrastructure that will serve North East Cambridge,

there is now an opportunity to realise regeneration across the area which can deliver a balanced, mixed and self-sustaining new city district.

4.3 The AAP has been the subject of three rounds of public consultation:

- Issues and Options – 8th December 2014 – 2nd February 2015
- Issues and Options – 11th February – 25th March 2019
- Draft Area Action Plan– 27th July – 5th October 2020

4.4 This report introduces the next stage of the AAP's production – the 'Proposed Submission' stage under Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012. This represents the first formal version of the AAP that the Councils consider 'sound' and capable of submission for Independent Examination in Public.

4.5 To be a 'sound' plan, the National Planning Policy Framework (NPPF) requires that plans must be:

- Positively prepared – the Proposed Submission AAP represents a pro-active strategy that can realise and manage the significant regeneration of the NEC area, having regard to local needs, site constraints, and infrastructure requirements.
- Justified – the policies and proposals of the Proposed Submission AAP represent the most appropriate local response when considered against reasonable alternatives and the findings of the evidence base.
- Effective – the policies and proposals of the Proposed Submission AAP are deliverable during its plan period and based on effective joint working, including with affected and interested parties as well as our delivery partners.
- Consistent with national policy – the implementation of the Proposed Submission AAP would secure the delivery of sustainable development in accordance with the policies of the NPPF.

5. Main changes made within the Proposed Submission AAP

5.1 The following section of the report summarises the main changes made in the Proposed Submission AAP in response to:

- over 4,000 comments received to consultation on the Councils' draft Area Action Plan in 2020;
- the outcomes of discussions held with the engagement Forums and delivery partners on key issues;
- further analysis of social and physical infrastructure required to support new development and to deliver the spatial vision for the area; and
- the findings of topic papers and evidence base studies on a range of matters including transport; employment; housing; retail; community facilities; landscape and visual impacts; and biodiversity; air quality; flood risk and sustainable drainage; development typologies; and development capacities.

5.2 The detailed comments received to consultation are published on the Councils' consultation website (accessed via this [link](#)). The Councils' response to the issues raised, alongside our consideration of the evidence base and the outcomes of engagement with our delivery partners, are provided in the Statement of Consultation (Appendix B), including a summary of the changes made to the AAP. It also contains an appendix containing the 2020 draft AAP showing the detailed changes between it and the Proposed Submission AAP.

The Vision for NEC

5.3 There was broad support for the draft Vision, in particular, the low carbon ambition, the priority afforded to active travel and public transport use, and to the integration of North East Cambridge with surrounding communities. Subtle changes have been made to the Vision to include specific reference to North East Cambridge being a healthy place, reflecting the Councils' priority and ambition, and to refer to high quality development, recognising the importance of good design and making North East Cambridge a place where people are proud to live and work.

Housing

5.4 While concerns were raised about the quantum and density of new residential development being proposed for NEC, the evidence from the emerging Greater Cambridge Local Plan confirms that NEC is a highly sustainable location and the benefits of locating homes close to jobs. Therefore, the quantum of housing is to be broadly maintained with 8,350 new homes proposed, but densities have

been reduced across the AAP area. This follows further analysis of different development typologies. The average density across the housing areas are now around 100 dwellings per hectare, similar to other developments like Eddington. The densities range from 70 homes per hectare around the edges of the area up to 300 homes per hectare within the District Centre.

- 5.5 Changes have also been made to Policy 11, which concerns the housing design standards to be applied, with additional detail included to ensure all new dwellings provide good living environments, address noise issues and overheating, and that private outdoor space cannot be delivered in the form of communal space. The policy has also been updated to include the requirements for accessible homes, including wheelchair accessible housing.

Building Heights

- 5.6 In response to concerns about the proposed height of new buildings within NEC, the heights have been reduced to 4-6 storeys generally, with a maximum height of 10 storeys. This is a reduction from the proposals in the 2020 draft AAP, which proposed 5-8 storeys generally with a maximum of 13 storeys. Following further evidence undertaken on heritage and townscape impacts of development at NEC, the Spatial Framework also addresses advice that development should not exceed certain heights in certain locations and it identifies where 'marker buildings' can be delivered to achieve placemaking benefits whilst protecting and enhancing the historic and build environment.

Open Space Provision

- 5.7 A number of comments received raised concerns with the amount of open space provision proposed within NEC. Related to this was concerns this could place pressure on the surrounding open spaces as well as the growing appreciation of access to local green spaces for mental health and wellbeing as a result of the COVID-19 pandemic.

- 5.8 In response, the Spatial Framework of the AAP has been amended so the amount of on-site open space provision will now meet the Cambridge City Council informal and children's play standards in full. In quantum terms, this represents an increase from circa 10.4 hectares to 27.6 hectares. In addition, new and enhanced links for pedestrians and cyclists from NEC across the A14 and the railway to

the wider countryside to the north and east will continue to provide access to the wider countryside network.

- 5.9 Further changes to Policy 8 seek to secure an improved distribution of open spaces across NEC; ensure all new homes will be within a five-minute walk of a local public open space; and clarify the expectation that the open spaces to be provided will be high quality, low maintenance, water efficient, multi-functional, multi-use, accessible and multi-generational and useable throughout the year, as well as making provision for a wide range of food growing spaces, including as part of a comprehensive landscape led approach to open spaces.

Commercial Floorspace and Jobs

- 5.10 To meet the increased open space standards, and to address concerns about the balance to be achieved between homes and jobs within NEC, the amount of new commercial (office) floorspace to be provided across NEC has been reduced by 25%. This brings the overall provision of new jobs down from 20,000 to 15,000 (in Policy 1) and will help reduce traffic and improve the ability to comply with the Trip Budget (Policy 22), which caps the maximum level of external vehicular peak hour trips within which future development must keep within.

Safeguarded Uses

- 5.11 Policy 24b has been updated to provide specific guidance on a number of existing protected or safeguarded uses and strategic uses requiring protection/relocation. These include the Waste Transfer Station and Aggregates Railheads (both protected by the Minerals and Waste Local Plan) and the Bus Depot (a strategic public transport facility) all located within or around Cowley Road Industrial Area. The policy changes clarify the preference in the AAP to see these uses relocated to suitable off-site locations to deliver upon the Spatial Framework but recognises this process may take time and in some cases may require interim measures, including relocation of the Waste Transfer Station to an area adjacent to the Aggregates Railheads, preferably on an interim basis. The processes by which these could take place have been agreed with relevant bodies in two statements of common ground included within the overall Statement of Common Ground for the AAP (see Appendix F).

Industrial Floorspace

- 5.12 Changes have been made to Policies 12b and 24b to strengthen the requirement that there is no net loss in the quantum of existing industrial (Class B2 and B8) floorspace as a result of the regeneration of NEC. This includes confirming the current levels of provision and how this should be re-provided in the North East Cambridge area. The retention of the same amount of industrial floorspace is important to maintain a mix of uses and a variety of employment opportunities within the area.
- 5.13 Further amendments have also been made that respond to comments about the potential for existing businesses to be displaced. These clarify that the policies concern only the protection of the floorspace and not the existing occupiers, recognising that industrial uses are likely to change over time anyway. However, reference has been added about the support the Councils corporately would intend to provide to occupiers that may be affected, including helping to identify suitable alternative sites. Together, the policies promote the consolidation and intensification of industrial use to the Cowley Road Industrial Area and the northern portion of the Chesterton Sidings area.
- 5.14 Other changes are required to reflect that Nuffield Road Industrial Estate is now proposed to be redeveloped for residential use, with the equivalent industrial floorspace required to be re-provided within the Cowley Road Industrial Estate and/or the northern part of the railway sidings area. As well as providing space for businesses, the intensification of the industrial floorspace within these areas will provide a buffer to the existing Aggregates Railheads and the adjacent proposed interim area for relocation of the Waste Transfer Station, helping to mitigate the impact of these safeguarded uses on any nearby residential development.

Biodiversity

- 5.15 The requirement to increase biodiversity overall (biodiversity net gain) has now increased from 10% to 20% in line with the emerging Greater Cambridge Local Plan policy proposals. The policy notes that achieving this fully on-site may be challenging due to the higher density nature of the North East Cambridge site, so will be considered on a case by case basis and at least 10% net gain should be on-site. 20% is double the biodiversity net gain now required under the recently passed Environment Act 2021.

Community Facilities

- 5.16 Following further evidence on a townscape assessment of the proposed Spatial Framework and revision to the Retail Study, the AAP now includes five centres and an enhanced level of retail provision than previously proposed (see Policy 15). All homes within NEC will now be within a five-minute walk of a District or Local Centre which will serve the day to day needs of people living in the area.
- 5.17 In addition, the County Council has updated the population forecasts and child yields for NEC and have recommended the previous safeguarded site for a Secondary School is no longer required based on the assumed housing mix. Policy 14 continues to make provision for three primary schools within NEC, including nursery provision. This is despite the updated Education topic paper recommending a requirement for two primary schools. However, to reflect this, the primary school site identified for the new Greenway Local Centre is proposed as a safeguard site in case it is required at a later stage in of the Plan, which will likely be influenced by the actual dwelling mix being delivered through granted schemes.

Other Matters

- 5.18 Other comments raised concerned the implications of the COVID-19 pandemic and whether this would affect the proposals being put forward through the AAP. In particular, the demand for new employment floorspace should working patterns change permanently, the reduction in the use of public transport, and the value placed on private amenity space and local parks for health and wellbeing.
- 5.19 While provision of amenity space and informal open space and play space are being increased in the Proposed Submission AAP, other potential impacts will need to be monitored. Specifically, the National Planning Policy Framework provides that Local Plans should be reviewed within 5-years of adoption. This will enable the Councils and our partners to reflect on the impacts of living with COVID-19 and to take account of any implications for meeting needs, including requirements to support the recovery from the pandemic.
- 5.20 Other comments queried whether the Waste Water Treatment Plant (WWTP) needed to be relocated and whether the full environmental costs of this were being taken into account through the preparation of the AAP.

- 5.21 The relocation of the WWTP is being advanced by Anglian Water through a Development Consent Order (DCO) following confirmation of the grant of the Housing Infrastructure Fund bid made by Anglian Water, in partnership with Cambridge City Council as a landowner and developer. The DCO process is an entirely separate statutory planning process from the plan-making process and will be determined under different legislation. It is therefore not a project or proposal within the scope of the emerging Greater Cambridge Local Plan or AAP to influence. Rather both plans are being prepared on the basis that the WWTP will be relocated, but this is not a requirement of either plan. The WWTP relocation will, however, be considered in the Sustainability Appraisal for both the emerging Greater Cambridge Local Plan and the AAP, as a plan or project being brought forward by another body, as part of assessing the cumulative impacts of the Plans.
- 5.22 It is however, acknowledged that the relocation of the WWTP would unlock a brownfield urban site that the evidence shows is a very sustainable location for development. Including the site in the two Plans at this stage ensures that future development in this area is brought forward in a comprehensive and coherent manner.
- 5.23 The Local Development Scheme setting out the plan making process for both the emerging Greater Cambridge Local Plan and AAP is clear that the plans will only progress to the later formal stages (proposed submission publication for consultation and submission for independent examination in public) when the DCO for the relocation of the WWTP is determined and if it is approved.
- 5.24 A further matter raised through the consultation on the AAP was the Chesterton Fen level crossing which is adjacent to the NEC area. Feedback has suggested that the level crossing should be replaced by a bridge over the railway into the NEC area due to the duration that the barrier is down and the severance it causes the community to the east of the railway.
- 5.25 Network Rail made representations to the Draft Area Action Plan (2020) consultation and in respect of the level crossing said: "Whilst it is acknowledged that Fen Road Level Crossing is located outside the Draft North East Cambridge AAP boundary, Network Rail welcomes further discussion with GCSP, Cambridgeshire County

Council and other stakeholders in relation to the crossing and potential opportunities for alternative access routes”. Given the crossing is outside the AAP area, the planning authorities, along with the highways authority and the CPCA have sought to engage with Network Rail through the Greater Cambridge Local Plan Transport Sub-Group, that has met on a 6-weekly basis, as the responsibility for any changes to a level crossing needs to be taken by Network Rail. Despite early engagement and discussions on this issue and how options for addressing it could be considered through the Ely Area Capacity Enhancement (EACE) programme, there has not been any direct engagement from Network Rail for a number of months.

- 5.26 A second phase of consultation on the EACE programme is being undertaken by Network Rail, which has concluded that no measures be proposed at Chesterton Fen level crossing. Network Rail attended the Cambridge City Council North Area Committee on Thursday 18 November at the Councils’ invitation and made a presentation on the current EACE consultation and why no measures were proposed for Fen Road crossing. In response to questions from councillors from both Councils raising their strong concerns and the safety of the crossing including access for emergency vehicles, they indicated that if the Councils wished to discuss the matter, Network Rail would be willing to do so. Representatives of Network Rail indicated that it was not suggesting that it was for others to resolve matters the responsibility of Network Rail but that it needed to work with third parties to discuss options.
- 5.27 The deadline for comments is 28 November 2021 and the Councils will be responding to the consultation via Lead Member out of cycle decisions and will continue to lobby through that programme for Network Rail to engage meaningfully with the Councils, County Council, CPCA and affected communities to work up an acceptable solution for Network Rail to implement.

6. Supporting evidence

- 6.1 The Proposed Submission draft of the AAP is informed by a raft of supporting evidence base studies and topic papers. A number of these are a statutory requirement to prepare:
- A Sustainability Appraisal (Appendix B), which assesses the likely environmental, social and economic impacts (both positive

and negative) of implementing the policies and proposals being put forward in the AAP. The SA informs the plan-making through an iterative process by helping to refine the plan's contents, ensuring we understand the sustainability impacts of proposals, and the reasonable alternatives, and then recommending changes to help mitigate negative impacts or optimise positive benefits. The AAP SA concludes that the proposal will help meet needs for jobs and homes and has a strong focus on moving towards net zero carbon emissions. The AAP is expected to result in overall significant positive effects against the majority of SA objectives. The SA has highlighted a risk of significant negative effects on air quality occurring, especially along the A14 Corridor AQMA, in combination with other developments to the north and east of Cambridge, if the trip budgets which the AAP seeks to achieve are exceeded in practice, which highlights the importance of this policy requirement. The alternative policy options for the AAP generally performed worse than the policies in the Proposed Submission AAP;

- A Habitat Regulations Assessment (Appendix C), which determines whether the draft NEC AAP policies and proposals might adversely affect the protected features of wildlife habitat sites that have international designations, concluded no adverse effect on integrity as a result of increased demand for recreation, water quality and water supply provided that the safeguards and mitigation measures required by the plan are successfully implemented and that in respect of water supply, the WRE Water Management Plan with adequate new water supply sources identified is in place prior to adoption of the plan; and
- An Equalities Impact Assessment (Appendix H), which is a systematic way of assessing whether the proposed policies of the NEC AAP might have a differential impact on particular communities, or groups within communities. The AAP EQIA concluded that the plan is robust and the evidence shows no potential for discrimination and that all appropriate opportunities have been taken to advance equality and foster good relations between groups.

6.2 The other evidence base studies and topic papers have been prepared to support the policies and proposals of the Proposed Submission NEC AAP. All of these studies will be made available to view on the Greater Cambridge shared planning website alongside the Proposed Submission of the AAP, so that all interested or

affected parties can scrutinise their detail, assessments, and findings.

7. Options

7.1 JLPAG members may decide to:

- Provide comments on the North East Cambridge Area Action Plan: Proposed Submission document, including the changes proposed to it in light of responses to consultation and new evidence, to the respective Local Planning Authorities;
- Not provide comments on the North East Cambridge Area Action Plan: Proposed Submission document, including the changes proposed to it in light of responses to consultation and new evidence, to the respective Local Planning Authorities.

8. Implications

Financial Implications

8.1 Currently anticipated to be within current budgets. This will be kept under review alongside other work priorities.

Staffing Implications

8.2 Currently anticipated to be delivered within our existing resources. This will be kept under review alongside other work priorities.

Equality and Poverty Implications

8.3 The Pre-submission Draft AAP has been subject to an Equalities Impact Assessment (see Appendix H).

Net Zero Carbon, Climate Change and Environmental Implications

8.4 The plan provides an opportunity to address the aspects of the environment that can be influenced by the planning system. The Climate Change Rating Tool has not been applied, however, these aspects will be considered by a range of evidence including via a Sustainability Appraisal.

Procurement Implications

8.5 None.

Community Safety Implications

8.6 The plan provides an opportunity to address aspects of community safety that can be influenced by the physical environment as well as policies to ensure that future development provides a safe and

healthy environment for local communities, including in terms of such issues as highway safety, noise, air quality and contaminated land.
