

Cambridgeshire Flood Risk Management Partnership

Appendix E

Cambridge and Milton Pluvial Modelling

These maps give an indication of areas of local surface water flood risk. The Surface Water Management Plan maps supersede the Flood Maps For Surface Water (www.environment-agency.gov.uk) and therefore should be taken as the source of data for surface water flooding in Cambridgeshire.

The scale and detail of modelling mean that these maps are indicative rather than specific and as such users will need to consult the relevant District Authority on individual planning applications. These maps will not be used in Environment Agency's National Flood Risk Assessment Project which categorises flood risk for use by the Insurance Industry.

Amendments may be made in the future to account for information gathered subsequently such as observed flood events.

Flooding from other sources such as watercourses and the sea is available from the Environment Agency (www.environment-agency.gov.uk).
